

Pharmacy

The Uniform Formulary

The Uniform Formulary (UF) process establishes a new cost share of \$22 per prescription, in both mail order and retail pharmacy services, for medications that are being designated as non-formulary under the UF regulation. The following medications have been designated as non-formulary on the Uniform Formulary. The effective dates are listed below. Patients currently using these non-formulary medications may wish to consult with their doctor about formulary alternatives.

The items in red are carried at the BACH pharmacies.

* Although all medications have a generic name, they are not all available as generic medications. Please see the [Formulary Search Tool](#) to find out if a generic equivalent is available for a specific medication.

Availability of Non-Formulary Medications at Military Treatment Facilities (MTFs) - MTFs are prohibited from having medications designated as non-formulary on the Uniform Formulary on their local formularies. MTFs will be able to fill non-formulary requests for these medications only if both of the following conditions are met: 1) an MTF provider writes the prescription, and 2) medical necessity is established for these products. MTFs may (but are not required to) fill a prescription for a non-formulary medication written by a non-MTF provider to whom the patient was referred, as long as medical necessity has been established. Active duty service members may not obtain non-formulary medications unless medical necessity is established.
